# Spraying Services

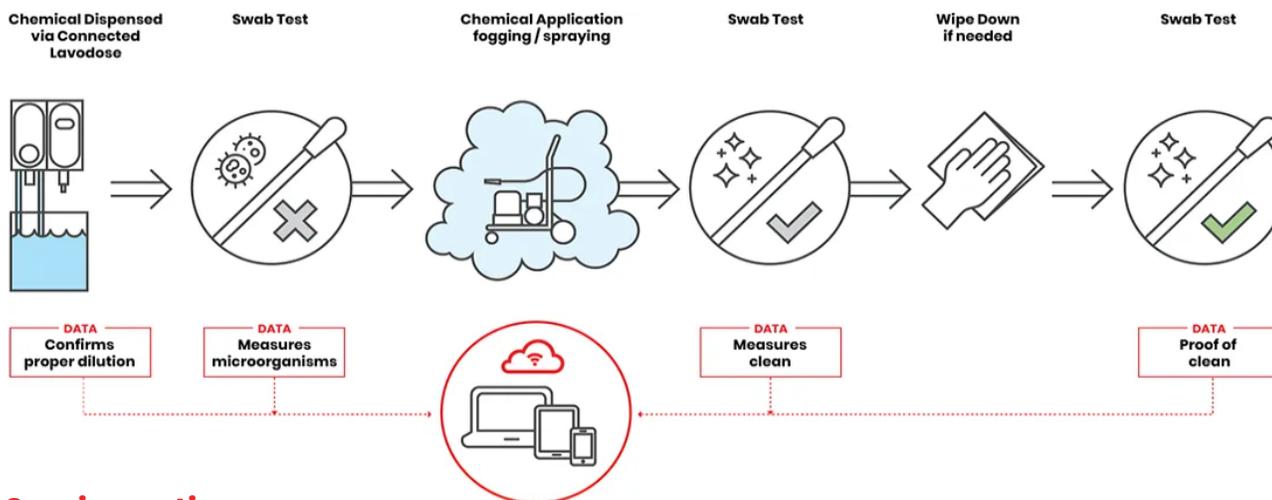

**Spraying is an effective way to consistently disinfect hard and soft surfaces. This process allows atomized chemical to dwell on a surface, for a final disinfection confirming clean.**

**Lavo is the only service company providing data to evidence clean.**

## Sample results

- K-8 school realized 70% decrease in microbes across surfaces, including 87% on a student desk.
- Gym / studio realized a 72% decrease in microbes on soft equipment and 83% on chair.
- Warehouse realized 90% decrease in microbes on forklift and 70% decrease on office desks.

## Lavo's patent-pending, data-driven process

## Service options

- Pre-event fogging of rental equipment with EPA approved chemical. ATP testing to validate clean.
- Optional second fog with Shield chemical (endorsed by Mayo Clinic) for extended kill claim.
